

The focus on last year's sales activities, in particular during the global financial recession of 2008-2009, has paid off. ICsense's YTD (Year-to-date) statistics of July 2010 show a project increase of 18% compared to the amount of projects kicked off in the same period last year.

ICsense further extended its amount of employees to support the growth. The design team has grown with 22 % since July 2009 and is composed of 27 analog designers and layouters as of this summer.

"We see a growth in our Business Unit Turnkey solutions, where we assist our customers from basic idea and business case towards a fully qualified ASIC," says CBDO Wim Claes, "Our customers rely on us as a long-term partner in delivering custom ASIC solutions with high-Q and minimal risks. A proof of which we see in the high customer satisfaction (>92% returning clients). We believe this BU will continue to increase the upcoming years."

ICsense is an IC design house with core competence in analog, mixed-signal and HV IC design.
