

For immediate release

Allegro Investment Fund portfolio company Eqcologic N.V. wins prestigious South German Vision 2009 Award with CoaxPress™ consortium.

Eqcologic N.V. has been granted the Vision 2009 award in the CoaxPress™ consortium. Eqcologic is supplying the core equalization chipset in order to realize a high-speed video data and power link over standard coax cable. CoaxPress™ delivers data speeds of 6.25GHz/sec over a 100meter coax cable. Lower speed driving signals of 20MHz/sec can be transmitted over the same coax line, as well as power transmission to the camera.

The Japan Industrial Imaging Association (JIIA) has agreed to host the standardization of CoaXPress™, as a new world standard for high speed video links.

“This award is an important proof of market and technology acceptance for the equalizer chipsets of Eqcologic as a solution to high speed video signal transport over simple coax cable. The advantage of the technology for increasing the bandwidth and simplifying the wiring of digital video cameras in a very broad range of applications is rapidly becoming the customers preferred solution“, said Peter Helfet, CEO of Eqcologic N.V.

“It is a great achievement for Eqcologic, that its chipset, being the technology core of the CoaxPress™ standard, was elected for this important South German award. Home based competition was very performing, but this did not withhold the jury to recognize the exceptional results obtained with the CoaxPress™ system“, said dr.ir. Alex Van den Bossche, managing director of Allegro Investment Fund and board member of Eqcologic N.V.

About Allegro:

Allegro Investment Fund N.V. is a Leuven-based open-end seed and early stage capital investment fund, focusing on high-tech ventures. The fund combines more than 40 years of relevant business experience in high-tech start-up and early stage management. Allegro invests in disruptive technologies managed by professional teams aiming at a significant and world-wide market. Allegro's shareholders are Captains of Industry with a wide variety of sector backgrounds.

About Eqcologic:

Eqcologic N.V. is a Brussels-based company, spun-out of the Vrije Universiteit Brussel. Formed in 2005, the company is commercializing innovative Equalizer technology. EqcoLogic is a fab-less semiconductor vendor, developing and supplying complete Equalizer circuits; the company also sub-licenses the core technology and product designs in certain markets. Along with exceptional signal recovery, EqcoLogic chips offer good operational tolerances and low power consumption. Designed for standard CMOS processes, the circuits can also be integrated into other communications chips. EqcoLogic is targeting video, audio, automotive and server applications with a number of business partners.
